

After more than one year of various developments which are more or less visible at first sight, we will introduce the new motion cycle 600 med at this years Medica. It will stand for the complete motion line 600 med. The new design cannot deny the relation to the motion line 800 med.

Less obvious is the completely new designed brake technology, which convinces by more resistance, more power output and distinctively less volume, but constant precision. Also the monitor and its interior have been redesigned and did not only get a modern look, but also offers new functionalities, such as a multicolour backlight, which indicates the correct training intensity.

The motion line 600 med will replace the motion line 500 med and will - of course - be available without the medical certification for the fitness market.

The line will be produced as of January 2015 - in Germany and based on order, so that we can fulfill as many of your feature wishes as possible.

Standard features:

- Multicolour-Backlight with Biofeedback
- RS232-interface
- 3 Training programs
- Medically certified according to 93/42 EEC
- Chipcard system
- Coded polar receiver
- power range: 15-500 watts, 20-120 rpm*
- GRID INDEPENDENT*

* except for the motion sprint 600 med

Optional features:

- Therapy program package with 11 training programs
- Handpulse- or earpulse-measurement
- External power supply for continuous operation
- Wireless network for training control via RFID-system
- models for increased user weight

The motion line 600 med has a new, multi-colour backlight as a standard feature, that can also be used for a biofeedback during the workout.
